

Features

1) Decode

When password been forgotten, you can get the decoded number by providing the code on the lock body to the company (customer care) to decode. The password will be changed back to the original management password "4321", user password"1234". Or, put the pin into the RST (reset) hole, release the pin when you hear the long sound of beep... the lock already reset.

2) Introduced with Anti-Theft Technology and Fake PIN password

Function; you can input any code(s) before or after the real password To prevent the real password being beeped. Maximum 16 digits

3) Auto-alarm will be activated when input wrong password 4 times

And the lock will be freezed for 60 seconds.

4) Automatic power shortage prompts (When lock show this signal).

The lock cannot be operated when the voltage is very low

5) Equipped with 2 pcs of AAA batteries, the last password will not be lost after changing the battery.
